P110	TV	Electronics	Chandigarh	45000	9	11000	5	4	Low

Task:

1. Create a report where products having profit above 8000 and rating equal to 5 are marked as “Best Product”, otherwise mark them as “Normal Product”.
2. Prepare a stock report where products become “Restock Required” if stock is below 10 or quantity sold is greater than 20.
3. Calculate the total profit earned from Electronics products and also calculate the total quantity sold for products whose status is “Available”.
4. Generate a summary showing the number of products from Delhi city, the number of Furniture products, and the number of products having rating 5.
5. Create a report where products are marked as “Best Seller” if quantity sold is above 20 and profit is above 7000, products are marked as “Good Product” if either rating is 5 or stock is above 15, otherwise mark them as “Average Product”. Also calculate the total profit earned from “Best Seller” products.
6. Prepare a stock analysis report where products from Electronics or Appliances category having stock below 10 are marked as “Urgent Restock”. Calculate the average price of these products and also count how many products satisfy the condition.
7. Create a sales performance report where products from Delhi city with rating 5 and status “Available” are marked as “High Demand”. Calculate the total quantity sold of these products and also find the average profit earned from them.
